

SAGRR web database user roles

By default, all users have read only access to the database. An administrator will assign user permissions based upon the role that the user will be performing. A user can have several permissions assigned.

- Dog – Dog records can be updated
- Members - Member records can be updated
- Applicant – Applicant records (applications) can be updated
- Approval – An applicant can be approved to receive a golden
- Dog Assignment – Can assign a dog to an applicant or member, also requires dog, member, and applicant permissions
- Administrator – Performs user and DB administration; accept new users, modify permissions, lock out users, enter Override mode to manually make status changes.
